Preprocessing
Network loading
Data Assimilation
Outputs
Mobile-phone OD
municipality demand
OpenStreetMap
directed road graph
MTS coils
fixed vehicle counts
Viasat GPS
probe trajectories
Demand preparation
weekday/weekend OD classes
Harmonization
time bins, directions, IDs
Geolocation
coils and GPS on polylines
Trip generation
source–destination agents
Routing
best paths on graph
minimocas
agent-based simulation
Raw link flows
φi (h)
Coil residuals
observed minus simulated
Turning weights
from simulated movements
Correction propagation
upstream and downstream links
Corrected link flows
φ̃i (h)
Maps and time series
network visualization
Regional link-by-time
traffic field
Webserver
submit, monitor, export
Independent validation
Viasat penetration scaling
